

10 Pole LED Candle Stand assembly

instructions.

Parts List

80cm Pole x 2

70cm Pole x 4

60cm Pole x 3

50cm Pole x 3

40cm Pole x 1

30cm Pole x 1

Threaded coupling nut x 4

LED Bulbs x 10

Pre-wired Metal base x 1

Light socket and wire assembly x 10 (all different lengths)

Assembly

Assemble poles as per illustration using the 4 threaded

coupling nuts.

Sort light socket and wires and match to pole lengths.

Feed wires through the pole and screw light socket onto the pole. (you may find it useful to not connect or unscrew the 2

poles until after the wires have been inserted) Wire should extend approx 3" from end of pole. If any of your wires do not extend at least 3", correct your configuration before proceeding.

Insert wire from bottom of pole down through threaded lug on top side base. (decide now on your layout. Graduated or

Staggered? If using graduated be sure to start with shortest pole at front right corner.

Screw until hand tight onto base. (do not connect wires before first insuring the pole is firmly attached to base)

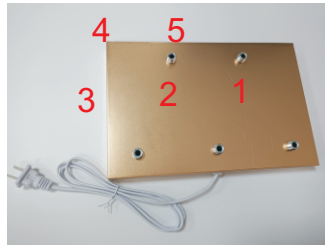

Once all poles are securely fastened Plug wires from light pole into base plug insuring red to red and black to black wires

at connection. (this process can be simplified by suspending the unit between two surfaces allowing easy access to

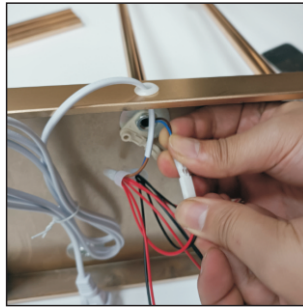

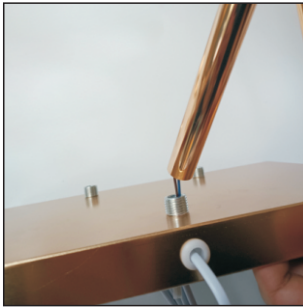

underside of base. If assembling inside a home even a couple feet off the ground is sufficient)

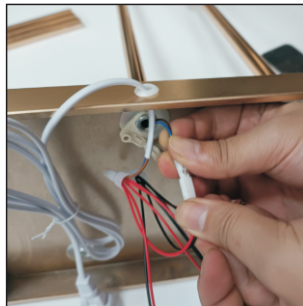

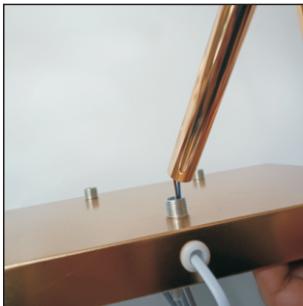

- PARTS LIST**
 5 lamp
 7 tube(1*40cm,2*50cm,3*60cm, 1*80cm)
 1 base
 2 screw

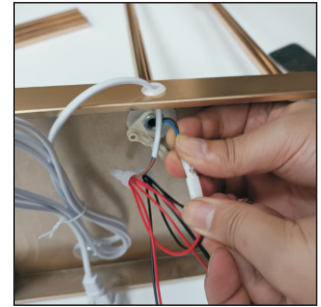

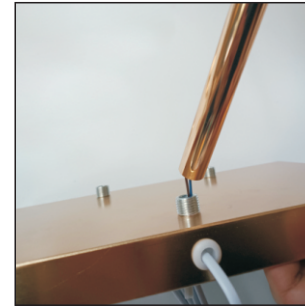

Position on base

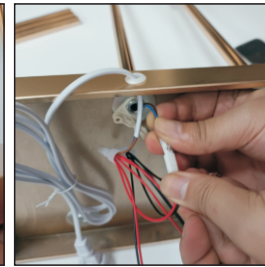

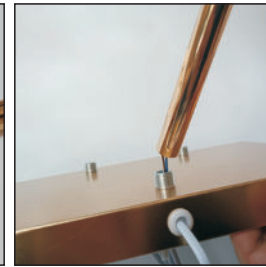

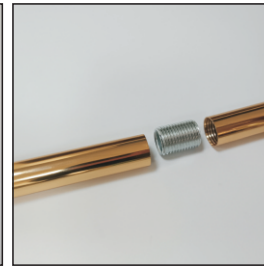

1. 46CM long lamp wire, through the 40CM long tube, install the lamp holder in one side, then install the tube on the position 1, and lock the power port on the back of the base

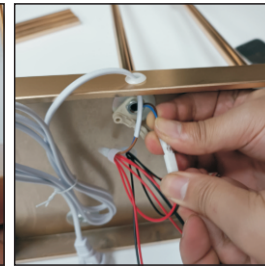

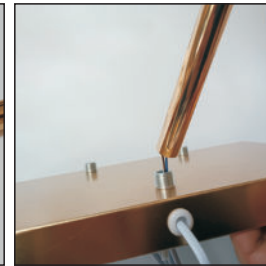

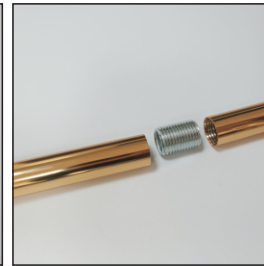

2. 66CM long lamp wire, through the 60CM long tube, install the lamp holder in one side, then install the tube on the position 2, and lock the power port on the back of the base

3. 86CM long lamp wire, through the 80CM long tube, install the lamp holder in one side, then install the tube on the position 3, and lock the power port on the back of the base

4. 106CM long lamp wire, through the 50CM long tube, install the lamp holder in one side, then install the tube on the position 4, and lock the power port on the back of the base

5. 126CM long lamp wire, through the 60CM long tube, install the lamp holder in one side, then install the tube on the position 5, and lock the power port on the back of the base
